Data sovereignty & ethics

where the data lives, and who is protected

P1 Local-first, cloud-optional

Corpus text, images and AI queries never leave the researcher's machine unless explicitly opted in.

ENFORCED BY cloud providers ship disabled; a server-mode hard-disable switch makes cloud calls fail closed.

P9 Consent and restraint around biometric-adjacent features

Facial and body inference serves media studies yet is legally and ethically sensitive.

ENFORCED BY opt-in module, off by default, with an in-app notice; never identity recognition or re-identification.

Epistemic discipline

how every claim is produced

P2 Grounded AI, never a bare chatbot

Every empirical claim must cite engine evidence that the engine can reproduce on demand.

ENFORCED BY the 27-tool agent runs the same deterministic functions as the UI; ungrounded claims are flagged, never asserted.

P3 Effect size and significance, always together

A key word is never reported as important on frequency grounds alone.

ENFORCED BY six association tests (MI, T-score, log-likelihood, Dice, chi-square, delta-P) beside four effect sizes (Log Ratio, %DIFF, Simple Maths, Odds Ratio).

P5 Interpretive claims are hypotheses, not facts

Ideology and CDA outputs carry the lens that produced them and await human confirmation.

ENFORCED BY twelve built-in theoretical frameworks (CDA, MCDA, SFL, appraisal…); findings stay framework-attributed readings until confirmed.

Verifiable honesty

how results stay auditable and trustworthy

P4 Zero-code, not zero-transparency

One-click outputs stay inspectable: which model, formula and version produced them.

ENFORCED BY measure and parameters shown on every result; a one-click auto-drafted Methods section is exportable for papers.

P7 Practical scale, honestly stated

No unlimited promises — designed for hundreds of millions of tokens on consumer hardware.

ENFORCED BY disk-backed, incrementally indexed corpora; bounded tables and job time caps with clear in-UI feedback.

P8 Reproducibility is a feature

Every project pins the exact tokenizer, tagger, model and formula versions used.

ENFORCED BY re-analysis creates a new annotation version instead of overwriting; exports can cite versions and formulas.

Cross-cutting principle

the linguistic-coverage mandate that spans all three families

P6 Arabic is a first-class citizen, not a bolt-on

RTL layout and the Arabic tool ecosystem belong to the core architecture from day one.

ENFORCED BY full RTL interface mirroring; CAMeL Tools morphology and variety identification in the engine core; one analysis surface across English, Arabic, Urdu, Hindi and Persian.

None of the nine is aspirational: each card names the shipped mechanism that enforces it.
