1 · Corpus construction

1. Upload documents — TXT, PDF, DOCX and images; automatic language tagging per document
2. Clean and normalize — per-language normalizers; Arabic orthographic unification and diacritic handling
3. Visual ingestion — the companion Lens app turns image corpora into analyzable annotations

▼

2 · Quantitative analysis

4. Concordance — simple search or CQL query language; one-click Arabic normalization across tools
5. Frequency and associations — collocation (8 measures), keyness (6), dispersion (4), n-grams
6. Layers and profiles — POS, grammar, dependency parsing, vocabulary profiling, sentiment
7. Vector KWIC — semantic re-ranking of concordance lines with multilingual embeddings

▼

3 · Interpretation and grounding

8. Discourse lenses — 15 publication-grounded frameworks — 7 textual, 8 visual (Kress & van Leeuwen)
9. Learner research — CAF report, CIA comparison, rule-based error-pattern candidates
10. AI assistant — every claim backed by a cited concordance line or flagged as unsupported

▼

4 · Publication outputs

11. Export tables and plots — Excel, Word, PDF, LaTeX and plain text with journal-ready formatting
12. methods.pdf — a draft methodology section generated from the actual analysis chain
13. YAML provenance — every operation logged: corpus ID, recipe, measure, version, timestamp
