1
Arabic input
Pasted text in the Arabic Tools panel, or
a corpus previously uploaded in 'Your Corpus'
selected for corpus-wide analysis
2
Normalization
Orthographic unification (alef, taa marbuta)
Diacritic stripping (dediac)
Buckwalter transliteration for romanized search
3
Morphology
CAMeL Tools analysis of every token:
root · pattern · lemma · stem · POS
Aggregated frequency tables
4
Variety identification
Dialect: MSA, Egyptian, Gulf, Levantine
Register classification
Honest capability labels in the UI
5
Analysis surfaces
Arabic concordance · collocation · sentiment
Parallel EN↔AR concordance
Corpus-wide bulk job (r4): chunked, cancellable, token/chunk/ETA progress
Aggregated report & exports
Top roots (juthur), patterns (awzan), lemmas and tokens with POS distribution — exportable as Excel / CSV / TSV / TXT / JSON, plus the engine's full-depth JSON report.
